

Why Roof Tile?

ARIZONA CONCRETE AND CLAY ROOF TILE

Our Arizona Legacy

For more than 50 years Newpoint™ Concrete Roof Tile has proudly served the Arizona market with a concrete manufacturing facility in Phoenix. Newpoint™ is proud to be one of the largest producers of concrete roof tile in the State of Arizona.

Reliable Roofing Solution

It's easy to see the value of tile when you compare the lifecycle cost of a concrete and clay tile roof to other roofing materials. According to the National Association of Home Builders (NAHB) chart, a concrete roof will last 3.75 times longer than an asphalt shingle roof.

Energy Savings

With energy costs increasing over time, our concrete and clay tile offers a superior roof that promotes energy efficiency and provides considerable cost savings. The insulating properties of tile help reduce attic temperatures and keep your home warmer in the winter and cooler in the summer, reducing the burden on air conditioning and heating.

Fully Transferrable Warranties

As a brand you can trust, Westlake Royal Roofing Solutions™ offers one of the most comprehensive, fully transferable concrete and clay tile roofing warranties available on the market today.* In comparison, other roofing materials may have prorated, non-transferable warranties that lose value over time.

Curb Appeal

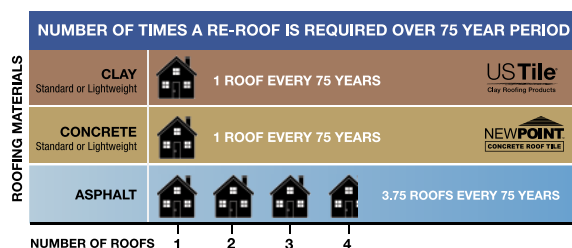

With many shapes and colors to choose from, tile complements a variety of architectural styles that helps build curb appeal and can lead to an increased home value.

Being Green - Our Tradition and Promise

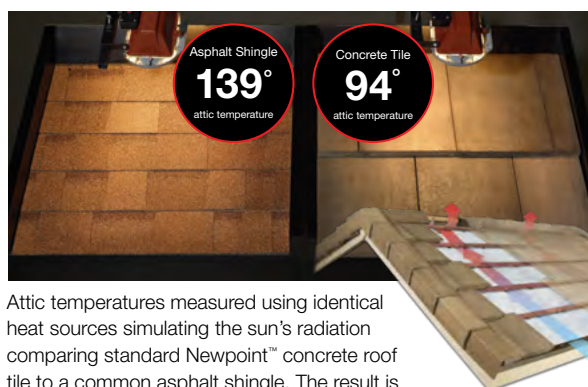

With our comprehensive portfolio of sustainable products, Newpoint™ and US Tile® are committed to using naturally available materials which mitigates the impact to the environment and emphasizes both conservation and energy efficiency.

Hail and Fire Tested

Our Class 3 & 4 "Hail Rated" concrete tile has passed severe impact resistance testing. All of our concrete and clay tiles are Class A fire rated, the highest rating possible.

Source: 2007 NAHB Study on Life Expectancy of Home Components

Attic temperatures measured using identical heat sources simulating the sun's radiation comparing standard Newpoint™ concrete roof tile to a common asphalt shingle. The result is less heat in the attic and lower energy bills.
