

Why Roof Tile?

TEXAS CONCRETE & CLAY ROOF TILE

Made in Texas

Newpoint™, manufacturer of concrete roof tile, has been serving home builders, HOA's and homeowners with affordable, attractive and long lasting roofing solutions since 1985. We offer an extensive range of colors and styles to complement any architectural design. Unique profiles include Madera, a cedar shake replacement with a rustic, wood appearance; traditional low profiles Slate and Shake; Mediterranean Villa; and Spanish mission barrel.

Reliable Roofing Solution

It's easy to see the value of tile when you compare the lifecycle cost of a concrete or clay tile roof to other roofing materials. According to the National Association Home Builders (NAHB) chart, a concrete roof will last 3.75 times longer than an asphalt shingle roof.

Energy Savings

With energy costs increasing over time, tile offers a superior roof that promotes energy efficiency and provides considerable cost savings. The insulating properties of tile help reduce attic temperatures and keep your home warmer in the winter and cooler in the summer, reducing the burden on air conditioning and heating.

Fully Transferable Warranties

As a brand you can trust, Westlake Royal Roofing Solutions™ offers one of the most comprehensive, fully transferable concrete and clay tile roofing warranties available on the market today.* In comparison, other roofing materials may have prorated, non-transferable warranties that lose value over time.

Being Green - Our Tradition and Promise

With our comprehensive portfolio of sustainable products, Newpoint™ Concrete Roof Tile is committed to using naturally available materials which mitigates the impact to the environment and emphasizes both conservation and energy efficiency.

Hail and Fire Tested

Our Class 3 & 4 "Hail Rated" concrete tile has passed severe impact resistance testing. All of our concrete and clay tiles are Class A fire rated, the highest rating possible.
