

# Why Roof Tile?

## COLORADO CONCRETE AND CLAY ROOF TILE

### Locally Made in Colorado

Newpoint™, manufacturer of concrete roof tile, has been serving Colorado home builders, HOA's and homeowners with affordable, attractive and long lasting roofing solutions since 2003. We offer an extensive range of colors and styles to complement any architectural design. Unique profiles include Madera, a cedar shake replacement with a rustic, wood appearance; traditional low profiles Slate and Shake; Mediterranean Villa; and Spanish mission barrel.

### Most Permanent Roofing Solution

It's easy to see the value of tile when you compare the lifecycle cost of a concrete tile roof to other roofing materials. According to the National Association Home Builders (NAHB) chart, Newpoint™ Concrete Roof Tile will last 3.75 times longer than an asphalt shingle roof.

### Energy Savings

With energy costs increasing over time, tile offers a superior roof that promotes energy efficiency and provides considerable cost savings. The insulating properties of tile help reduce attic temperatures and keep your home warmer in the winter and cooler in the summer, reducing the burden on air conditioning and heating.

### Fully Transferable Warranties

As a brand you can trust, Westlake Royal Roofing Solutions™ offers one of the most comprehensive, fully transferable concrete & clay tile roofing warranties available on the market today.\* In comparison, other roofing materials may have prorated, non-transferable warranties that lose value over time.

### Curb Appeal

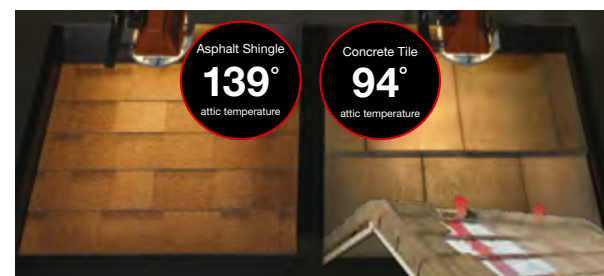

With many shapes and colors to choose from, tile complements a variety of architectural styles that helps build curb appeal and can lead to an increased home value.

### Insurance Discounts

A tile roof may contribute to a reduction in your insurance premium with discount rates of up to 27%. Please consult with your insurance carrier, roofer and energy provider for exact rates for your home.

### Hail and Fire Tested

Our Class 3 & 4 "Hail Rated" concrete tile has passed severe impact resistance testing. All of our concrete and clay tiles are Class A fire rated, the highest rating possible.

Attic temperatures measured using identical heat sources simulating the sun's radiation comparing standard Newpoint™ Concrete Roof Tile to a common asphalt shingle. The result is less heat in the attic and lower energy bills.
